

## Care and Maintenance Tips

Legacy Polymer Products Inc. manufactures bathroom partitions, shower stalls and vanities using the best quality material available. Cared for properly, these products will provide years of secure privacy and durability. Legacy recommends the following tips to help ensure this.

Legacy Polymer Products are produced from High Density Polyethylene resin that resists most contaminants and can be easily cleaned using almost any non-abrasive household cleanser. Use of a soft rag or sponge is recommended, avoiding any type of abrasive cleaning material, such as steel wool or abrasive nylon sponge that may alter the finish on the components. After cleaning the partitions, the use of a spray protectant, similar to those used on automobile interiors, may be used to enhance the beauty of the materials.

The polymer components of Legacy's products are of a sturdy construction, able to withstand the harshest of abuse and use. Unfortunately these materials may become scratched, while only affecting the components cosmetic appearance, rest assured that the durability of the product will not suffer. To help lessen the negative appearance of a small scratch, simply use a blunt, rounded object to burnish or push the displaced material back into the scratched area. Never use heat or sandpaper to attempt to repair a scratch, as it may alter the manufactured finish of the plastic.
